I urge you to reject the NAB's petition 04-160. I value XM radio, especially the XM instant Traffic and Weather. We have children and travel often in our vehicle. Instead of purchasing a weather radio that could be used in our car or the radar detector with built in NOAA info, we opted for XM radio. Not only do we receive local traffic and weather updates for many cities, we also receive the Weather Channel. Both of these options help us to feel much safer when driving great distances with or without our children. It is much more convenient to use than our old way of exiting, finding a gas station and hoping someone there had a weather update.
